

The Lazy Man's Way to Get Rich Using AI

Practical income paths, honest tradeoffs, and a 30-day plan for creators, freelancers, consultants, operators, and solo founders who want AI to actually pay for itself.

AI tools, prices, and platform rules change fast. This document is a snapshot, not a permanent reference. If a tool, price, or policy referenced here looks out of date, check the live URL above before acting on it.

Important Disclaimer

This guide is for informational and educational purposes only. It is **not financial, legal, tax, or business advice**. Nothing in it guarantees that you will make money. The income paths described are *experiments* and *offer tests* you can run — outcomes depend on your skills, your market, your effort, your honesty with customers, and a lot of luck. Treat every dollar figure in this PDF as an illustrative range, not a forecast.

You are responsible for following the laws, tax obligations, and platform rules that apply to you. AI tool providers (OpenAI, Anthropic, Google, xAI, and others) all publish usage policies¹². Marketplaces (Upwork, Fiverr, Gumroad, others) publish their own AI and disclosure rules³⁴. Read them. Follow them. When in doubt, ask a lawyer or accountant in your jurisdiction.

How to read this guide

1. Skim Chapters 1–4 to calibrate your mental model of what AI is actually good at.
2. Pick **one** income system from Chapter 5 that matches a skill or domain you already have access to.
3. Run the 30-day plan in Chapter 6 against that one system.
4. Use the prompts in Chapter 7 and the checklists in the Appendix as scaffolding, not scripture.

The lazy part is not "no work." The lazy part is **leverage** — pointing the smallest possible effort at the highest possible result.

2. Anthropic — Usage Policy Update, <https://www.anthropic.com/news/usage-policy-update>
3. Upwork — AI preferences, <https://support.upwork.com/hc/en-us/articles/23808634769683-How-to-control-your-AI-preferences-on-Upwork>
4. Fiverr — Using AI on Fiverr, <https://help.fiverr.com/hc/en-us/articles/34998793899665-Using-AI-on-Fiverr-Guidelines-for-freelancers-and-clients>

Contents

Executive Summary	The lazy principle is leverage, not magic
Chapter 1	What AI can and cannot do for income generation
Chapter 2	The lazy AI business model
Chapter 3	The fastest AI income paths
Chapter 4	Tools and what each is best for
Chapter 5	12 practical AI income systems
Chapter 6	The 30-day lazy launch plan
Chapter 7	Prompt systems and templates
Chapter 8	Risks, ethics, compliance, and what not to do
Chapter 9	How to keep this updated as a living PDF
Appendix	Checklists, templates, scripts, tools, glossary

The lazy principle is leverage, not magic

Here is the entire book in five sentences. The rest is detail.

1. AI is the cheapest, fastest junior employee in history. It does not get tired, does not negotiate salary, and works at 3am. It also lies confidently, breaks silently, and cannot be trusted alone with anything that matters.
2. The job that pays is still the same job that has always paid: **find a problem people will pay to make go away, package the solution as a clear deliverable, sell the deliverable, and deliver it on time.**
3. AI changes the math on the *delivery* step. Work that used to take a week now takes a morning. Work that used to require a specialist now requires a generalist with the right prompt. This is the only edge that matters.
4. The "lazy" path is to pick **one narrow audience, one painful problem, and one packaged offer**, and use AI to drive your cost of delivery toward zero. Most people fail because they pick three audiences, five problems, and zero offers.
5. Nobody is going to make you rich. AI is leverage. Leverage multiplies what you point it at. If you point it at nothing, you get nothing, faster.

The honest framing

That is the entire thesis. The rest of the book is **how**. If you finish this PDF without picking one specific audience and one specific offer, you have read entertainment, not strategy.

What AI can and cannot do

Most of the bad AI income advice on the internet falls into one of two traps:

- **Trap A:** "AI can do anything! Just spin up an AI agency and print money."
- **Trap B:** "AI is a fad, ignore it."

Both are wrong. Calibrate honestly.

What AI is genuinely good at, today

Modern frontier models — Claude Sonnet 4.5 / Opus⁵, GPT-5⁶, Gemini 2.5, Grok 4⁷ — are reliably useful for:

- **First drafts of almost any text artifact.** Emails, proposals, blog posts, SOPs, scripts, contracts (to be reviewed by humans), product descriptions.
- **Transformation tasks.** Summarize this, translate this, restructure this into a table, rewrite this for X audience, extract these fields from this PDF.
- **Coding assistance.** Boilerplate, debugging, small scripts, prototypes, internal tools. Tools like Cursor, Claude Code, v0, Lovable, and Replit Agents can take a non-engineer from "I have an idea" to "I have a working prototype" in a weekend.
- **Research and synthesis with citations.** Tools like Perplexity, ChatGPT Search, Claude with web search, and Gemini can compile multi-source answers with linked sources in minutes.
- **Structured analysis on data you provide.** Spreadsheets, transcripts, customer feedback, support tickets. Ask it to categorize, cluster, find themes.
- **Repetitive judgement at scale.** "Does this email look like a real lead or spam?" "Does this product photo follow our brand guidelines?" Hooked into Zapier, Make, or n8n, this is genuinely transformative.

What AI is still bad at

- **Being correct without supervision.** Hallucinations are reduced, not eliminated. Anything published, billed, or filed must be human-reviewed.
- **Domain truth.** Legal, medical, tax, regulatory, accounting — the model can sound right and be wrong in costly ways.

- **Long, stateful work with strong consistency requirements.** A 200-page book, a 50,000-line codebase, a multi-week project — quality drifts without human structure.
- **Brand voice from scratch.** It can imitate. It cannot decide who you are.
- **Anything requiring a human relationship.** Discovery calls, closing deals, negotiating, escalations. AI can prep you. It is a poor substitute for showing up.
- **Knowing what you should be working on.** That is your job.

The honest framing

AI is a force multiplier, not a substitute for direction. If you don't know what to build, who you're building for, or what problem you're solving, AI will simply help you fail faster and more efficiently.

The income paths in this book all assume you bring **one** of the following: a domain you already understand, an audience you already have access to, or the willingness to talk to ten potential customers before writing a line of marketing.

-
- 5. Anthropic — Claude Sonnet, <https://www.anthropic.com/claude/sonnet>
 - 6. OpenAI — Introducing GPT-5, <https://openai.com/index/introducing-gpt-5/>
 - 7. xAI — Grok 4, <https://x.ai/news/grok-4>

The lazy AI business model

Strip every "AI side hustle" idea down and it becomes the same five-step loop:

1. **Find pain.** A real, specific, recurring problem that a real, specific person already pays (or would pay) to solve.
2. **Package output.** Turn the solution into a clear, named deliverable with a clear scope and price.
3. **Sell a result.** Sell the outcome, not the AI. Nobody buys "AI". They buy "fewer hours on accounts receivable" or "a website by Friday."
4. **Automate delivery.** Use AI + automation to compress the time from order to delivery.
5. **Update and reuse.** Every project teaches you something. Roll the learning back into prompts, templates, and SOPs.

That loop is the entire business model. Everything in this book is a variation on it.

The four levers

When you're stuck, pull one of these:

- **Narrower audience.** "Marketing copywriters" > "Marketing copywriters at B2B SaaS companies under 50 people."
- **Sharper deliverable.** "Content help" > "Five LinkedIn posts per week, scheduled and posted for you, \$X/month."
- **Better acquisition.** Stop posting on X. Talk to ten potential customers this week.
- **Lower cost-to-deliver.** Move one manual step into a Claude / Zapier / Make / n8n workflow.

The unsexy truth: 90% of AI income failures are caused by audience and offer problems, not AI problems.

The "lazy" filter

Before committing to a path, run it through these questions. If you can't answer yes to most of them, pick something else.

☐ Can I describe the customer in one specific sentence?

- ☐ Can I describe what I deliver in one sentence?
- ☐ Can I deliver the first version in under 7 days?
- ☐ Can I name three places these customers already gather online?
- ☐ Can the entire delivery be done by me + AI, without hiring?
- ☐ Does the customer have a budget line where this fits?
- ☐ Can I imagine the customer telling a friend about the result, unprompted?

The more "yes" answers, the more lazy-compatible the idea.

The fastest AI income paths

A tour. Eight categories, each with a one-paragraph reality check. Pick one. Then go to Chapter 5 for full systems.

3.1 AI-assisted freelance services

The fastest path for anyone with an existing skill. Writers, designers, marketers, devs, analysts, ops people: keep doing what you already do, but use AI to compress delivery time by 2–10× and either lower your prices and raise volume, or hold your prices and pocket the margin.

Reality check. Marketplaces like Upwork and Fiverr now have stricter rules about AI disclosure and AI-generated profile photos. Read them before you list.

3.2 Productized services

Take one repeatable service ("LinkedIn ghostwriting", "weekly SEO blog post", "monthly bookkeeping cleanup") and sell it as a fixed-price, fixed-scope subscription. AI does the heavy lifting of drafting; you do the curation, judgement, and client communication. Predictable revenue, predictable workload.

Reality check. The single highest-leverage move most freelancers can make.

3.3 Lead generation and research services

Businesses pay shockingly well for accurate lists: "100 marketing directors at Series A SaaS companies with funded events budgets." With Perplexity, ChatGPT/Claude, public web sources, and a structured workflow, one person can produce these lists at quality that beats much of the existing market.

Reality check. Be careful with scraping rules and personal-data laws.

3.4 Content systems

Newsletters, YouTube channels, podcasts, X / LinkedIn accounts. AI helps you research, outline, draft, repurpose, transcribe, and schedule. The hard part hasn't changed: doing this every week for a year before it pays.

Reality check. The new lazy variation: charge clients to run their content engine instead of (or in addition to) your own.

3.5 Templates and prompt packs

Productized digital downloads — Notion templates, prompt packs, spreadsheet calculators, slide decks. Low fulfillment cost, high gross margin. Platforms like Gumroad take a flat 10% fee; the rest is marketing.

Reality check. Hard part: standing out in a saturated market.

3.6 Micro-SaaS and internal tools

With Claude Code, Cursor, v0, Lovable, and Replit Agents, non-engineers can ship working web apps in days. Pick a tiny problem and charge a small monthly fee.

Reality check. Higher upside, higher complexity. Plan for support, hosting costs, and ongoing maintenance.

3.7 Local business AI services

Plumbers, dentists, lawyers, restaurants. Most local businesses have not even started using AI. You can sell them: a website refresh, a chatbot for FAQs, an after-hours voicemail-to-text-to-summary pipeline, AI-drafted Google reviews replies, or a "we'll respond to every lead within 60 seconds" automation.

Reality check. Low competition, high relationship requirement.

3.8 Education, coaching, and workshops

If you have learned to use AI well in your domain, that knowledge has value to the people in your domain who haven't yet. Workshops, cohort-based courses, 1:1 coaching, in-house training for SMBs.

Reality check. Especially powerful when paired with one of the categories above.

Tools and what each is best for

A short, honest snapshot. Tools and prices move quickly — verify the live links before subscribing.

Frontier chat assistants

Claude (Anthropic)

Best at long, careful writing; code; nuanced reasoning; agentic workflows; computer use. Sonnet 4.5 is positioned by Anthropic as their best model for agents, coding, and computer use⁸. Pro plan is \$20/month, with Max tiers at \$100 and \$200/month for heavier usage; Claude Code (terminal/IDE assistant) follows the same plan structure⁹. Personal default for anyone doing professional writing or shipping software.

ChatGPT (OpenAI)

Best at general-purpose assistant; voice; image generation; broad ecosystem; custom GPTs. OpenAI now offers Free, Go (\$8/mo), Plus (\$20/mo), and Pro tiers (\$100 and \$200/mo), plus Business and Enterprise¹⁰. GPT-5 targets faster responses, better coding and writing, and reduced hallucination relative to earlier models¹¹.

Perplexity

Best at research, current-events questions, citation-heavy answers, lightweight web agents. Pro plan is \$17/month annual / \$20 monthly at last list¹². If you sell research, lead lists, or "what's happening in X market" work, this is your daily driver.

Gemini (Google)

Best at deep integration with Google Workspace (Docs, Sheets, Gmail, Meet); long context; multimodal. Plans are bundled into Google AI subscriptions through Google One¹³. Underrated if your clients live in Workspace.

Grok (xAI)

Best at real-time information from X; image and voice features; less corporate filtering than other assistants. Grok 4 supports a 256K context window with multimodal input¹⁴. Useful as a second opinion or for social-listening tasks.

Open-source / local models

When to consider: privacy-sensitive client work, high-volume tasks where per-token cost matters, offline scenarios, or hobby experimentation. Llama, Qwen, Mistral, and others can run locally via Ollama or LM Studio. Tradeoff: lower quality than frontier models on most tasks today.

Coding and app builders

Cursor

AI-native IDE. Individual plan \$20/mo, Teams \$40/user/mo. Best for serious solo devs.¹⁵

Claude Code

Terminal-first agent; included with Claude plans (Pro/Max/Team).

v0 (Vercel)

Generates React/Next.js apps from prompts. Free tier with \$5 of credits, Team at \$30/user/mo. Strong for marketing pages and SaaS prototypes.¹⁶

Replit

Cloud IDE with Agent for end-to-end app building. Good for non-engineers.¹⁷

Lovable

AI app builder targeted at non-engineers. Good for first-draft web apps.

Automation glue

Zapier — Free tier (100 tasks/month); Starter ~\$19.99/mo annual, Professional ~\$49/mo annual, Team ~\$69/user/mo annual¹⁸. Largest app catalog. Easiest for non-technical buyers.

Make.com — Free tier (1,000 ops); Core ~\$10.59/mo, Pro ~\$18.82/mo, Teams ~\$34.12/mo at last list¹⁹. More flexible than Zapier for complex flows.

n8n — Open-source automation; cloud Starter ~€20/mo, Pro ~€50/mo, with self-hosting available²⁰. Best for technical operators who want to own the stack.

No-code and storefronts

Bubble — Full-stack no-code app builder²¹. Steep learning curve but capable.

Webflow / **Framer** — Marketing sites and portfolios.

Gumroad — Sells digital products and memberships, 10% flat fee²². Lowest friction for selling templates and prompt packs.

Stripe Payment Links / Invoicing — Take payments without a website. Standard processing fees apply²³.

Picking your stack (rule of thumb)

Your "lazy stack"

One assistant for thinking and writing. (Claude or ChatGPT.)

One research tool with citations. (Perplexity.)

One automation tool. (Zapier if you sell to non-technical businesses; Make or n8n if you sell to yourself.)

One payment tool. (Stripe.)

One storefront if you sell digital products. (Gumroad.)

Add tools only when they unlock a specific income system, not because they look interesting.

12 practical AI income systems

For each system below: **who it helps**, **what you sell**, **tools**, **workflow**, **first offer**, **illustrative pricing range**, **acquisition**, **delivery checklist**, and **update notes**.

Read this first

All pricing ranges are **illustrative**, in USD, and depend heavily on your market and positioning. Treat them as orientation, not targets. Income is not guaranteed. Hypothetical client scenarios below are *implementation scenarios*, not real customer success stories.

The Productized LinkedIn Ghostwriting Service

Who it helps	Founders, executives, and B2B salespeople who want to build a personal brand on LinkedIn but won't sit down and write.
What you sell	5–8 LinkedIn posts per month, drafted in your client's voice, scheduled and published on their behalf, with light engagement.
Tools	Claude or ChatGPT for drafting; a transcription tool (Otter, Descript); Buffer or Typefully for scheduling; a shared Notion or Google Doc.

Workflow

1. Onboard with a 60-minute "voice interview" call. Record it.
2. Transcribe. Feed transcript plus 10 past best posts into Claude with a brand-voice prompt.
3. Generate 12 post drafts; cut to 6–8; edit by hand.
4. Send for approval, schedule, monitor.

First offer

"I'll write your next 8 LinkedIn posts in your voice. Flat fee. If you don't like them, you don't pay."

Illustrative pricing range

\$800–\$3,500/month per client (illustrative). *Not a forecast.*

Acquisition

Cold outreach to founders whose posts you genuinely admire; ask for referrals after 90 days.

Delivery checklist

- ☐ Voice interview recorded
- ☐ Transcript saved
- ☐ Brand-voice prompt locked
- ☐ Drafts in client's queue
- ☐ Scheduled
- ☐ Monthly recap sent

Update notes

Rotate voice prompt every quarter; LinkedIn algorithm and AI-content detection norms change.

The SEO Cluster Engine for Niche Sites

Who it helps	Owners of niche content sites and SMBs who want consistent search-driven traffic but cannot afford a \$2,000/mo agency.
What you sell	A monthly content cluster — one pillar article and 6 supporting articles around a single keyword cluster, written, edited, and published.
Tools	Perplexity for SERP and topic research; Claude or GPT-5 for drafts; an SEO data tool (Ahrefs, Semrush, SE Ranking); the client's CMS.

Workflow

1. Keyword cluster selected.
2. Outlines drafted, then human reviewed.
3. AI writes first drafts; human edits give them the spine.
4. Published with internal links; tracked monthly.

First offer

"Pick one keyword cluster. I'll publish 7 articles around it in 30 days. Flat fee."

Illustrative pricing range

\$1,500–\$5,000 per cluster (illustrative). *Not a forecast.*

Acquisition

DMs to SMB founders; outbound to niche-site owners on X; one free pilot with a friend's site to build a case study (label clearly as a pilot).

Delivery checklist

☐	Keyword cluster confirmed
☐	Briefs approved
☐	Drafts edited
☐	Internal links mapped
☐	Published
☐	30-day traffic report

Update notes

Google's stance on AI content continues to evolve. Always disclose to clients; never disclaim authorship dishonestly.

The Cold Email Research Service

Who it helps	B2B sales teams who burn hours building lists.
What you sell	A weekly delivery of 100–250 enriched leads (verified email, role, company signal, personalized first line) for a specific Ideal Customer Profile.
Tools	Apollo, Clay, Hunter, or LinkedIn Sales Navigator for sourcing; Perplexity for company research; Claude for personalization at scale; a strict-schema spreadsheet.

Workflow

1. ICP defined with client.
2. List sourced and enriched.
3. AI generates personalized opening line per row, citing a specific recent signal (funding, hire, product launch).
4. Human spot-checks 10%.
5. Delivered.

First offer

"Give me your ICP. I'll deliver 100 enriched leads with personalized openers in 5 business days."

Illustrative pricing range

\$500–\$2,500 per batch, depending on enrichment depth (illustrative). *Not a forecast.*

Acquisition

DMs to founders who post about hiring SDRs or struggling with outbound; pitch as an outsourced researcher.

Delivery checklist

- ☐ ICP signed off
- ☐ Sourcing query saved
- ☐ Enrichment run
- ☐ Spot-check passed
- ☐ Spreadsheet delivered
- ☐ Replacements offered for bounces

Update notes

Privacy laws (GDPR, CAN-SPAM, CCPA, state laws) restrict what you can do with personal data. Read the law in your buyer's jurisdiction.

The Local Business AI Concierge

Who it helps	Local service businesses — dentists, contractors, lawyers, real estate agents, small clinics.
What you sell	A "done for you" AI starter package: a website refresh, a homepage chatbot, voicemail-to-summary, and a "respond to every lead within 60 seconds" flow.
Tools	Claude/ChatGPT for copy; Cursor or v0 for site builds; Zapier or Make to wire it all together; Twilio or OpenPhone for SMS; a calendar tool.

Workflow

1. 30-minute discovery call.
2. Fixed-scope buildout (1–3 weeks).
3. Handoff and staff training.
4. Optional monthly retainer for changes and improvements.

First offer

"I'll set up AI lead capture for your business in 14 days. Flat fee, monthly support optional."

Illustrative pricing range

\$2,000–\$6,000 setup; \$300–\$1,500/month retainer (illustrative). *Not a forecast.*

Acquisition

Walk into local businesses. Coffee meetings. Chamber of commerce. Referrals beat ads at this scale.

Delivery checklist

☐ Discovery call done
☐ Scope signed
☐ Site live
☐ Bot deployed
☐ Lead flow tested end-to-end
☐ Staff trained
☐ 30-day check-in scheduled

Update notes

Compliance varies by industry (HIPAA for clinics, attorney advertising rules for lawyers). Get domain-specific guidance before promising anything regulated.

The Notion + AI Operating System for Founders

Who it helps	Solo founders and small teams drowning in their own information.
What you sell	A custom Notion workspace ("Operating System") with AI-powered pages for weekly review, OKRs, customer feedback inbox, content calendar, and a "ask my company" Q&A.
Tools	Notion AI; Notion's database features; Zapier/Make for ingest; Claude/ChatGPT for prompt design.

Workflow

1. Audit existing tools and docs.
2. Design the workspace.
3. Build with templates.
4. Migrate critical data.
5. Train the founder on rituals.

First offer

"I'll build you a Notion OS tuned for your business in 10 days. If it doesn't replace at least three tools you use today, full refund."

Illustrative pricing range

\$1,500–\$5,000 setup; optional \$300–\$800/mo maintenance (illustrative). *Not a forecast.*

Acquisition

Solo founder communities (Indie Hackers, founder Slack groups), X, referrals.

Delivery checklist

☐	Tool audit done
☐	Workspace built
☐	Data migrated
☐	Rituals documented
☐	30-min training delivered
☐	Loom walkthrough saved

Update notes

Notion's AI features and pricing change frequently; restate scope each quarter.

The "Done for You" Prompt Pack

Who it helps	Professionals in a specific role (recruiters, real estate agents, copywriters, paralegals, teachers) who want AI to work but don't know how to ask.
What you sell	A curated, tested, role-specific pack of 50–100 prompts with explanations, example outputs, and a "how to combine them" guide. Delivered as a Notion page or PDF.
Tools	Claude / GPT-5 for testing; Notion or a simple PDF for delivery; Gumroad for sales.

Workflow

1. Interview 5–10 practitioners.
2. Identify the 20 most painful, repetitive tasks.
3. Build a prompt for each.
4. Test each prompt 5+ times.
5. Write the explainer; ship.

First offer

Launch to your warm network with a 50%-off founder discount in exchange for a testimonial.

Illustrative pricing range

\$19–\$149 one-time, depending on depth and niche (illustrative). *Not a forecast.*

Acquisition

Post tips daily in the niche's online communities; the prompt pack is the upsell.

Delivery checklist

- ☐ Niche locked
- ☐ Interviews done
- ☐ Prompts tested
- ☐ Examples written
- ☐ PDF/Notion built
- ☐ Gumroad page live
- ☐ Launch email sent

Update notes

Re-test all prompts every 6 months as model behavior shifts.

The Micro-SaaS for a Specific Workflow

Who it helps	Anyone with a narrowly painful, narrowly-paying recurring task.
What you sell	A small web app that does one job, billed monthly.
Tools	Cursor or Claude Code for backend; v0 or Lovable for frontend; Stripe Billing for subscriptions; Vercel or Railway for hosting; PostgreSQL or Supabase for data.

Workflow

1. Find the pain.
2. Prototype the happy path in a weekend.
3. Ship to 10 willing testers.
4. Charge from week 1 (even \$5/month proves intent).
5. Iterate.

First offer

"I'm building this for [exact role]. Lifetime access to the first 50 customers for \$99." (Use lifetime sparingly.)

Illustrative pricing range

\$9–\$49/mo per user; \$99–\$499 lifetime for early customers (illustrative). *Not a forecast.*

Acquisition

Build in public; post weekly progress; cold DM the exact target user; one Product Hunt launch at v1.0.

Delivery checklist

- ☐ Pain validated with 5 conversations
- ☐ MVP shipped
- ☐ Stripe live
- ☐ Onboarding email written
- ☐ Support email monitored
- ☐ Uptime monitor on

Update notes

Most micro-SaaS dies in year 1 from support load, not lack of customers. Plan an "off switch" before you start.

The AI-Assisted Newsletter for a Niche

Who it helps	Professionals who want a curated weekly digest of their industry.
What you sell	A free newsletter (to grow audience) plus a paid tier (deep dives, archives, prompts, tools) at \$5–\$20/month.
Tools	Perplexity and Claude for research and synthesis; Beehiiv, Substack, or Ghost for publishing; an "ingest inbox" (RSS, X lists, podcasts).

Workflow

1. Monday — collect.
2. Tuesday — Claude drafts.
3. Wednesday — you edit.
4. Thursday — publish.
5. Friday — promote.

First offer

Free weekly newsletter; paid tier opens at 500 subscribers.

Illustrative pricing range

\$5–\$20/mo paid tier; sponsorships at scale (illustrative). *Not a forecast.*

Acquisition

Post each issue's takeaways on LinkedIn/X; guest-swap with adjacent newsletters; one short audio summary per episode.

Delivery checklist

☐ Sources audited
☐ Draft written
☐ Human edit pass
☐ Subject line A/B tested if list >1k
☐ Published
☐ Engagement reviewed Friday

Update notes

A newsletter is a 12–24 month investment. Treat early revenue as bonus, not validation.

AI Workshops and Cohort Training for Teams

Who it helps	SMBs and mid-market teams whose leaders know AI matters but have no idea how to roll it out.
What you sell	A 2- or 4-week applied workshop for 5–20 employees, ending with each participant shipping one AI-powered workflow.
Tools	Whatever the client uses (ChatGPT Enterprise, Claude Team, Gemini, Microsoft Copilot); Zoom/Meet; a private Slack or Discord; a shared template library.

Workflow

1. Pre-engagement audit.
2. 4 live sessions.
3. 1:1 office hours.
4. "Ship your workflow" capstone.
5. Final readout with ROI estimates.

First offer

"I'll run a 4-week applied AI workshop for your team and we'll measure hours saved at the end."

Illustrative pricing range

\$5,000–\$25,000 per cohort (illustrative). *Not a forecast.*

Acquisition

Speak at industry meetups; LinkedIn thought-leadership; warm intros from your network.

Delivery checklist

☐ Pre-audit complete
☐ Sessions scheduled
☐ Templates shared
☐ Office hours held
☐ Capstone workflows shipped
☐ ROI memo delivered

Update notes

Re-record sessions each cohort; the field shifts every quarter.

The AI-Native Resume and Profile Service

Who it helps	Mid-career professionals job-hunting in a tougher market.
What you sell	A package — resume rewrite, LinkedIn rewrite, 5 tailored cover letters, an interview prep packet, and a reusable "JD-to-tailored-resume" prompt.
Tools	Claude / GPT-5 for drafting; a structured intake form; a Loom for the final walkthrough.

Workflow

1. 45-minute intake interview.
2. AI-assisted drafts.
3. Human polish.
4. Walkthrough.
5. 30 days of small revisions.

First offer

Flat-price package with a "we work until you have your first interview" guarantee (within reason).

Illustrative pricing range

\$300–\$1,500 per client (illustrative). *Not a forecast.*

Acquisition

LinkedIn content for job seekers; partnerships with bootcamps and career coaches; referral program.

Delivery checklist

☐ Intake done
☐ Resume v3 finalized
☐ LinkedIn updated
☐ 5 cover letters
☐ Prep packet
☐ Loom walkthrough
☐ 30-day check-in

Update notes

ATS systems and recruiter norms around AI-written resumes are evolving; keep the human voice loud.

The AI Internal-Tools Builder for SMBs

Who it helps	10–100 person businesses with messy spreadsheets, no engineering team, and a lot of repetitive ops work.
What you sell	Custom internal tools — a quoting app, a customer onboarding portal, an inventory dashboard, a Zapier-glued workflow that replaces three spreadsheets and a Friday meeting.
Tools	Claude Code or Cursor for backend; Retool, Lovable, v0, or Bubble for frontend; Zapier / Make / n8n to wire things; the client's existing data sources.

Workflow

1. 60-minute audit.
2. "Highest-pain workflow" picked.
3. 1–3 week build.
4. Handover.
5. Support retainer.

First offer

"I'll replace your worst spreadsheet with a real tool in 2 weeks. Flat fee."

Illustrative pricing range

\$3,000–\$15,000 per tool; \$500–\$2,000/mo optional retainer (illustrative). *Not a forecast.*

Acquisition

SMB owner meetups; LinkedIn case studies; referrals from accountants and bookkeepers.

Delivery checklist

- ☐ Audit memo
- ☐ Scope signed
- ☐ Build delivered
- ☐ Loom training
- ☐ 30-day support window
- ☐ Retainer offered

Update notes

Document everything. SMB clients churn faster when the original builder is unreachable.

The "Operator-in-Residence" Retainer

Who it helps	A solo founder or 2–10 person team that needs a part-time "second brain".
What you sell	A monthly retainer for 10–40 hours, billed flat, in which you use AI to do the work of a much more expensive operator.
Tools	Whatever the client uses, plus your private stack of Claude/GPT prompts and Zapier / Make / n8n flows.

Workflow

1. Onboarding week to map systems.
2. Weekly 30-minute sync.
3. Ongoing async work with documented SOPs.
4. Quarterly review of impact.

First offer

Pilot month at 30% discount; full price thereafter.

Illustrative pricing range

\$1,500–\$8,000/month per client (illustrative). *Not a forecast.*

Acquisition

Warm referrals only — this is a trust-heavy role.

Delivery checklist

☐ Onboarding map
☐ SOPs documented
☐ Weekly sync set
☐ Monthly recap sent
☐ Quarterly review on calendar

Update notes

Highest leverage for someone with strong operations instincts; highest stakes. Bring boundaries, contracts, and confidentiality clauses.

The 30-day lazy launch plan

A defaultable plan for the person who has read this far and still doesn't know where to start. Pick one system from Chapter 5 before Day 1.

Week 1 — Sharpen

Day 1	Write a one-sentence ICP. "I help [exact person] at [exact size/type of company] who is struggling with [exact problem]."
Day 2	Write your one-sentence offer. "I deliver [exact thing] in [exact time] for [exact price]."
Day 3	List 25 people who fit your ICP. Use LinkedIn, X, communities.
Day 4	Talk to 3 of them. Ask, don't pitch. ("What's the worst part of [problem]?")
Day 5	Refine offer based on what they actually said.
Day 6	Build the simplest possible offer page (Notion, Carrd, or a Google Doc). Include price, scope, FAQ, payment link.
Day 7	Rest. Seriously. Lazy is a feature.

Week 2 — Stand up the stack

Day 8	Pick your 5-tool stack from Chapter 4. Subscribe to nothing you won't use this week.
Day 9	Build your prompt library for the offer (use Chapter 7 as a starting point).
Day 10	Build the delivery template (the doc / sheet / file your client gets at the end).
Day 11	Do one "ghost" run end-to-end for a fake client. Time it. Cut steps.
Day 12	Set up payments. Stripe Payment Link or an invoicing tool.
Day 13	Write the onboarding email and the delivery email.
Day 14	Rest.

Week 3 — Sell

Day 15	Message 10 ICPs. Personal. Specific. No mass copy-paste.
Day 16	Message 10 more. Iterate.
Day 17	Run any reply through a 15-minute call. Listen 80%, talk 20%.
Day 18	Send 3 proposals. Use one of the templates in the Appendix.
Day 19	Follow up on Day 15's messages.
Day 20	Post one piece of useful content where your ICP lives.
Day 21	Rest.

Week 4 — Deliver and decide

Days 22–26	Deliver to your first paying customer. Document every step.
Day 27	Ask the customer for a written testimonial and a referral.
Day 28	Update your offer page with the testimonial.
Day 29	Write down: what was painful? What can AI absorb? What should I never automate?
Day 30	Decide. Re-run, scale, or pivot to a different system. Don't ghost halfway.

If you reach Day 30 with zero customers

You have not failed. You have data. Most likely problems and fixes:

- "Nobody replied" > ICP or message is wrong. Talk to 10 more people.
- "People replied but didn't buy" > Offer or price is wrong. Ask the no's why.
- "Customer hated delivery" > Scope was wrong. Shrink it.

Prompt systems and templates

These are scaffolds, not magic words. The point of a prompt system is to **encode the structure of a good answer** so the model has something to fill in. Edit aggressively for your domain.

7.1 The Voice-Match Prompt (for ghostwriting)

You are writing in the voice of {NAME}, who is {ROLE} at {COMPANY}.
Their writing style:
- {3-5 specific patterns: sentence length, common words, recurring metaphors}
Their values and pet peeves:
- {bullet list}
Things they would NEVER say:
- {bullet list}

Below are 10 examples of their best past posts:
{paste 10 examples, separated by ---}

Now draft 5 short LinkedIn posts in their voice about: {TOPIC}.
Each post: 100-250 words, conversational, ends with a question or invitation.
Do not use the words "leverage", "synergy", or any hashtag.

7.2 The Productized Brief Prompt

Act as a senior {DOMAIN} consultant. I am scoping a productized service.
Audience: {one-sentence ICP}
Outcome they want: {specific outcome}
Constraints: {budget, tools, regulatory}

Produce:

- 1) A one-paragraph pitch in plain English.
- 2) A scope of work in 5-8 bullet points.
- 3) A list of 5 things explicitly NOT included.
- 4) A 30-day delivery plan with weekly checkpoints.
- 5) Three pricing options (small / standard / premium) with rationale.
- 6) Five FAQ questions a buyer would ask, with honest answers.

7.3 The Cold-Outbound Personalizer

You will write a personalized first line for a cold email.
Context about the recipient:
- Name: {NAME}
- Role: {ROLE}
- Company: {COMPANY}

- Recent public signal: {paste a recent post, hire, funding event, podcast, etc.}

Rules:

- 1-2 sentences max.
- Mention the specific signal.
- Do not flatter. Do not say "I love your work."
- Sound like a human who actually read the thing.

Return only the opener, no commentary.

7.4 The 'Translate to a Spreadsheet' Prompt

You will extract structured data from the text below.

Schema (columns): {col1, col2, col3, ...}

Rules:

- One row per {entity}.
- If a field is missing, write "UNKNOWN".
- Do not invent data. If you are unsure, mark UNKNOWN.

Return as CSV with a header row. Nothing else.

TEXT:

{paste source}

7.5 The 'Critique My Offer' Prompt

You are a skeptical buyer of {OFFER}. You are NOT my coach. You are not nice.

Read my offer below and give me:

- 1) Three reasons a smart buyer would NOT buy this.
- 2) The 5 weakest words/phrases in the copy.
- 3) Two competing offers I'm probably losing to and why.
- 4) One question I'm avoiding answering.

OFFER:

{paste your offer page}

7.6 The Delivery QA Prompt

You are the most senior {DOMAIN} reviewer on Earth.

Below is a draft deliverable for a paying client.

Goal: find what's wrong before the client does.

Check for:

- Factual errors.
- Logical gaps.
- Unsupported claims.
- Anything that sounds AI-generated rather than expert.
- Anything that violates {client's brand guidelines / regulatory rules}.

Return a numbered list of issues, most severe first.

Do not rewrite. Only critique.

DRAFT:

{paste draft}

7.7 The Weekly Operator Prompt

You are my chief of staff. Here is this week's input:

- Calendar events: {paste}
- Open tasks: {paste}
- Unread important emails: {paste subject lines + sender}
- Cash position: {one number}
- One thing I'm avoiding: {one sentence}

Produce:

- 1) A 3-bullet "what actually matters this week."
- 2) A list of tasks to drop, defer, delegate, or do.
- 3) The single hardest conversation I should have.
- 4) Reality check - is anything on fire I'm not naming?

These seven prompts cover roughly 80% of the work in this book. Customize them. Save them. Re-test every six months.

Risks, ethics, compliance

The lazy way to lose everything is faster than the lazy way to make anything. This chapter is short, blunt, and not optional.

8.1 Do not lie about AI involvement

If a client asks "did you use AI?" — answer truthfully. Fiverr's published guidelines specifically require freelancers to disclose AI use when asked²⁴. Upwork has tightened rules around AI in proposals and AI-generated photos in profiles²⁵. Marketplace bans are easier than they look.

8.2 Read the AI provider's usage policy

OpenAI²⁶, Anthropic²⁷, Google, and xAI all publish acceptable-use and usage policies. They restrict, among other things: building tools that deceive users about being AI; generating non-consensual sexual content; political manipulation; certain regulated advice (medical, legal, financial) without appropriate disclaimers; and high-risk autonomous systems. If your business model violates these policies, expect to be cut off at the worst possible moment — usually after you've made promises to customers.

8.3 Personal data laws are real

GDPR, CCPA, CAN-SPAM, and a growing list of US state privacy laws apply to lead-generation, scraping, cold email, and any retention of personal data. "I'm just a freelancer" is not a defense. Get the rules from a real lawyer in your jurisdiction before you build a lead-gen service.

8.4 Don't promise income to anyone

Especially if you sell prompt packs, courses, or coaching. "Make \$10k/month with AI" claims are an FTC red flag in the US and are illegal or restricted in many other markets. Use language like "income paths", "experiments", and "what worked for me." Tell people clearly: **income is not guaranteed.**

8.5 Don't deepfake real people

Voice clones, face swaps, and AI-generated images of real public figures or private individuals are explicitly prohibited on most marketplaces and AI platforms, and

increasingly illegal.

8.6 Be careful with regulated industries

If you sell AI services to healthcare, legal, or financial clients: HIPAA, attorney advertising rules, GLBA, broker-dealer regulations, and similar regimes apply. Carrying professional liability insurance, getting a real client agreement, and avoiding any work you don't fully understand is the minimum bar.

8.7 Set boundaries on what AI sees

Don't paste client confidential data into a free consumer LLM. Use enterprise tiers, business-grade contracts, or local models. Tell clients what you do with their data. Get it in writing.

8.8 The 'would I be embarrassed?' test

Before publishing anything AI-assisted, ask: "If a customer or journalist saw exactly how this was made — every prompt, every shortcut — would I be embarrassed?" If yes, redo it. The lazy path that survives is the one that survives daylight.

How to keep this updated as a living PDF

This PDF is a snapshot. The actual living edition lives at <https://example.com/library/lazy-ai-rich>.

What changes most often

- **Pricing.** Frontier model and tool pricing moves quarterly. Always re-check before subscribing or quoting clients.
- **Model capabilities.** A new release can shift what's possible by months in a single day. Re-test your prompts after major releases.
- **Platform policies.** Marketplace AI-disclosure rules, image policies, and outreach rules update unpredictably.
- **Tax and legal.** US 1099 thresholds²⁸, state privacy laws, and AI-specific laws (EU AI Act, state laws) are all in motion.

How a living PDF actually works

The reader (you) opens the live URL. The hosted edition fetches the latest version of the manuscript, regenerates citations against current sources, and serves a fresh PDF. Your account stores your library.

The version date and edition number at the top of every page are how you know whether you're holding a fresh copy or a stale download.

Reader's update ritual (every 90 days)

1. Open the live edition.
2. Re-read Chapter 4 (tools) and Chapter 5 (systems you use).
3. Re-test your top 3 prompts against the current default model.
4. Check the AI provider's usage policy for your stack.
5. Re-check your one-sentence ICP and one-sentence offer. They drift.

Ninety minutes a quarter, and your business does not rot.

28. IRS — Self-employed individuals tax center,
<https://www.irs.gov/businesses/small-businesses-self-employed/self-employed-individuals-tax-center>

Checklists, templates, scripts, tools

A1. Quick-Start Checklists

Pre-launch checklist (Day 7)

- ☐ One-sentence ICP written down.
- ☐ One-sentence offer written down.
- ☐ Offer page live with payment link.
- ☐ First 25 ICP names listed.
- ☐ At least 3 ICP conversations completed.
- ☐ Refund / no-show policy decided.

Stack checklist (Day 14)

- ☐ One assistant subscribed (Claude or ChatGPT).
- ☐ One research tool (Perplexity).
- ☐ One automation tool (Zapier / Make / n8n).
- ☐ Payments (Stripe).
- ☐ Storefront (Gumroad) if selling digital downloads.
- ☐ Cloud doc store (Google Drive or Notion).
- ☐ Calendar booking link.

First-delivery checklist (Days 22–26)

- ☐ Kickoff call recorded with permission.
- ☐ Scope confirmed in writing.
- ☐ Drafts produced and reviewed.
- ☐ QA pass with the Chapter 7.6 prompt.

☐ Delivery email sent with what + how + next step.

☐ Testimonial requested.

☐ Lessons logged into your "playbook" doc.

A2. Offer Page Template

Headline: I help {EXACT PERSON} {EXACT OUTCOME} in {EXACT TIME}.
Subhead: {How this is different - one sentence.}

Who this is for: {bullet, bullet, bullet}
Who this is NOT for: {bullet, bullet}

What you get:
1) {Deliverable 1}
2) {Deliverable 2}
3) {Deliverable 3}

How it works:
Week 1: {...}
Week 2: {...}
Week 3: {...}

Investment: \${PRICE}, paid {when}.
Refund policy: {plain English}.
Booking: {payment link or calendar link}

FAQ:
{Five most common buyer objections, answered honestly.}

A3. DM / Email Outreach Scripts

Cold DM (LinkedIn / X)

Hi {Name} - saw your post about {specific thing}. The part about {specific detail} matched what I'm seeing with {one similar client/case}.

I help {role} with {exact problem} - happy to send a one-pager if useful.
No pitch otherwise.

Pilot offer email

Subject: {specific problem} - 14-day pilot

Hi {Name},

I'd like to run a 14-day pilot of {offer} for {company}. Fixed scope, fixed price, no surprises. If at the end you don't think it was worth it, you don't pay.

Here's the one-pager: {link}

If interested, here's a 15-minute slot to walk through it: {link}

- {Your name}

Follow-up

Quick follow-up on the {offer} idea. Two thoughts:

- 1) {a specific new observation about their business}
- 2) {one risk they should know about that you can help with}

Want me to send a scoped proposal? No pressure.

Post-delivery testimonial request

Hi {Name},

Thanks for trusting me with {project}. If you're willing, would you write 2-3 sentences I can use on my site about what it was like to work together and what changed?

Totally optional. If you'd rather not, I'll send a referral request in a couple of months instead.

A4. Tool Comparison Snapshot (May 2026)

Prices below are illustrative for orientation only, drawn from each provider's public pricing pages at time of writing. Verify before subscribing.

Category	Tool	Entry plan	Notable strength
Assistant	Claude	\$20/mo Pro	Long-form writing, coding, agentic
Assistant	ChatGPT	\$20/mo Plus	Broad ecosystem, voice, image
Research	Perplexity	\$20/mo Pro	Cited research, current events
Assistant	Gemini	Google AI plan	Workspace integration, long context
Assistant	Grok	Bundled with X	Real-time X data, 256K context
Coding IDE	Cursor	\$20/mo Individual	AI-native IDE for solo devs
App builder	v0	\$30/user/mo Team	Next.js / React generation
App builder	Replit	Paid tiers	Browser IDE + Agent
App builder	Lovable	Paid tiers	Non-engineer-friendly
Automation	Zapier	\$19.99/mo Starter	Largest app catalog
Automation	Make.com	~\$10.59/mo Core	Visual flows, flexible
Automation	n8n	~€20/mo Starter	Open-source, self-hostable
Storefront	Gumroad	10% flat fee	Easiest digital-product sales
Payments	Stripe	Per transaction	Payment links, invoicing

A5. Glossary

Agent	An LLM running in a loop, taking actions on tools and reading back the results, until a goal is met.
API	A programmatic interface to a tool. Most AI providers offer one; using it is usually cheaper than the consumer app for high-volume use.
Context window	How much text the model can read at once. Larger windows let you paste in more reference material.
Hallucination	When the model produces a confident, plausible answer that is not true.
ICP	Ideal Customer Profile. The one-sentence description of who you are selling to.
LLM	Large Language Model. Claude, ChatGPT, Gemini, Grok, Llama, etc.
Productized service	A service sold like a product: fixed scope, fixed price, predictable delivery.
Prompt	The instructions you give an LLM. Treat it like writing a short brief to a smart junior employee.
RAG	Retrieval-Augmented Generation. The model is given your documents to ground its answers.
Retainer	A recurring monthly fee for an agreed scope of ongoing work.
SOP	Standard Operating Procedure. The written, step-by-step "how we do this here."
Token	The unit AI providers bill on. Roughly ¾ of a word.

Final Word

The lazy man's edge has always been the same: spend less effort on the things that don't matter so you can spend more on the things that do. AI didn't invent that idea. It just lowered the price of the things that don't matter.

Pick one system. Run the 30-day plan. Update this PDF in 90 days. The "rich" part is downstream of doing that ten times in a row.

Go.

First Edition, May 25, 2026. Living edition: <https://example.com/library/lazy-ai-rich>.
Author: Perplexity Computer.
